## **I.1 INTRODUCTION**

Natural resources play an important role in the development of a country. The way they affect the economy is by either helping in the development or bringing it into a complete downfall. A country that tends to have more natural resources and has a way to refine it, have a better and stable economy. The most important natural resources are land, water, forest, sun, wildlife, air, mountain, minerals etc. People use these resources for their existence on earth. All living creatures depend on natural resources for their survival, growth, and development. Water supports the life system of human beings, vegetation, animals and birds, living creatures and wildlife. Similarly, forest resources, land resources and mineral resources are essential for our welfare, development, and prosperity. So soil, water and vegetation are the basic resources on which the human being as well as the living being primarily depends upon livelihood and survival. The conservation of natural resource is one of the major concerns. Thus Watershed based management has been considered as a strategy for protecting

## **I.2 MAIN OBJECTIVES**

- To impart scientific and systematic activities to maintain the normal ecological balance between soil, water and biodiversity.
- To implement activities for rainwater harvesting which results in the increase of groundwater level and to ensure the availability of water.
- To prevent the degradation of biodiversity and undertaking activities for environmental regeneration.
- To prevent soil erosion and increase the fertility and water storage capacity of the soil.
- To provide livelihood support for those who depend the natural resources in the watershed areas.

- To create awareness and educate the people on the far-reaching implications of ecological degradation and inspire their mindset for the preservation of biodiversity.
- To enrich bio diversity by renovating and protecting the existing water resources in the area.
- To harness locally available natural resources in an optimum manner to achieve the overall goal of sustainable development.
- To give specific importance to the productivity enhancement of agriculture/horticulture/ animal husbandry activities and livelihood development.
- To promote farming and allied activities while ensuring resource conservation and regeneration.

## I.3 DETAILS ABOUT MICRO WATERSHED

## I.4 ORGANIZATIONAL SET UP

### GOVERNANCE LEVEL

**EXECUTIVE LEVEL**

**State Level Nodal Agency (SLNA)**

Administration & Preparation of State Perspective and Strategic Plan.

**District Level Coordination Committee (DLCC)**

Technical Approval For Projects

**Block Level Coordination Committee (BLCC)**

Supervision and monitoring of DPR Preparation and project implementation

**Watershed Coordination Committee (WCC)**

Implementation of Watershed Works With MGNREGS Labour Groups & User Groups

**User Groups (UG) /SHGs**

To Undertake Watershed Development Works

## TECHNICAL SUPPORT LEVEL

### Technical Support Unit (TSU)

State level unit to provide Technical guidance

### Watershed Cell Cum Data Centre (WCDC)

Administrative & Technical Help to PIA & DPC, Documentation, and Online Monitoring

### Watershed Development Team (WDT)

Guiding watershed comitee in formulation of action plan

preparation of DPR, surveys, physical verification and accounts

## **PART II**

## II.1 GENERAL DESCRIPTION OF PROJECT AREA

### Brief history

The watershed area under reference consists of Grama panchayaths namely Nagalassery, Thirumittakode, Thrithala, and Chalissery located in Thrithala Block of Palakkad District. The watershed area has an elevation from 20 to 140 msl. The entire area has an undulating topography featured with hills and deep valleys. The 5084 ha of land has been selected as treatable area for IWMP Project VIII. The watershed is drained by different perennial streams which merge itself into Bharathapuzha River. Majority of the population depend on agriculture and allied activities for their livelihood.

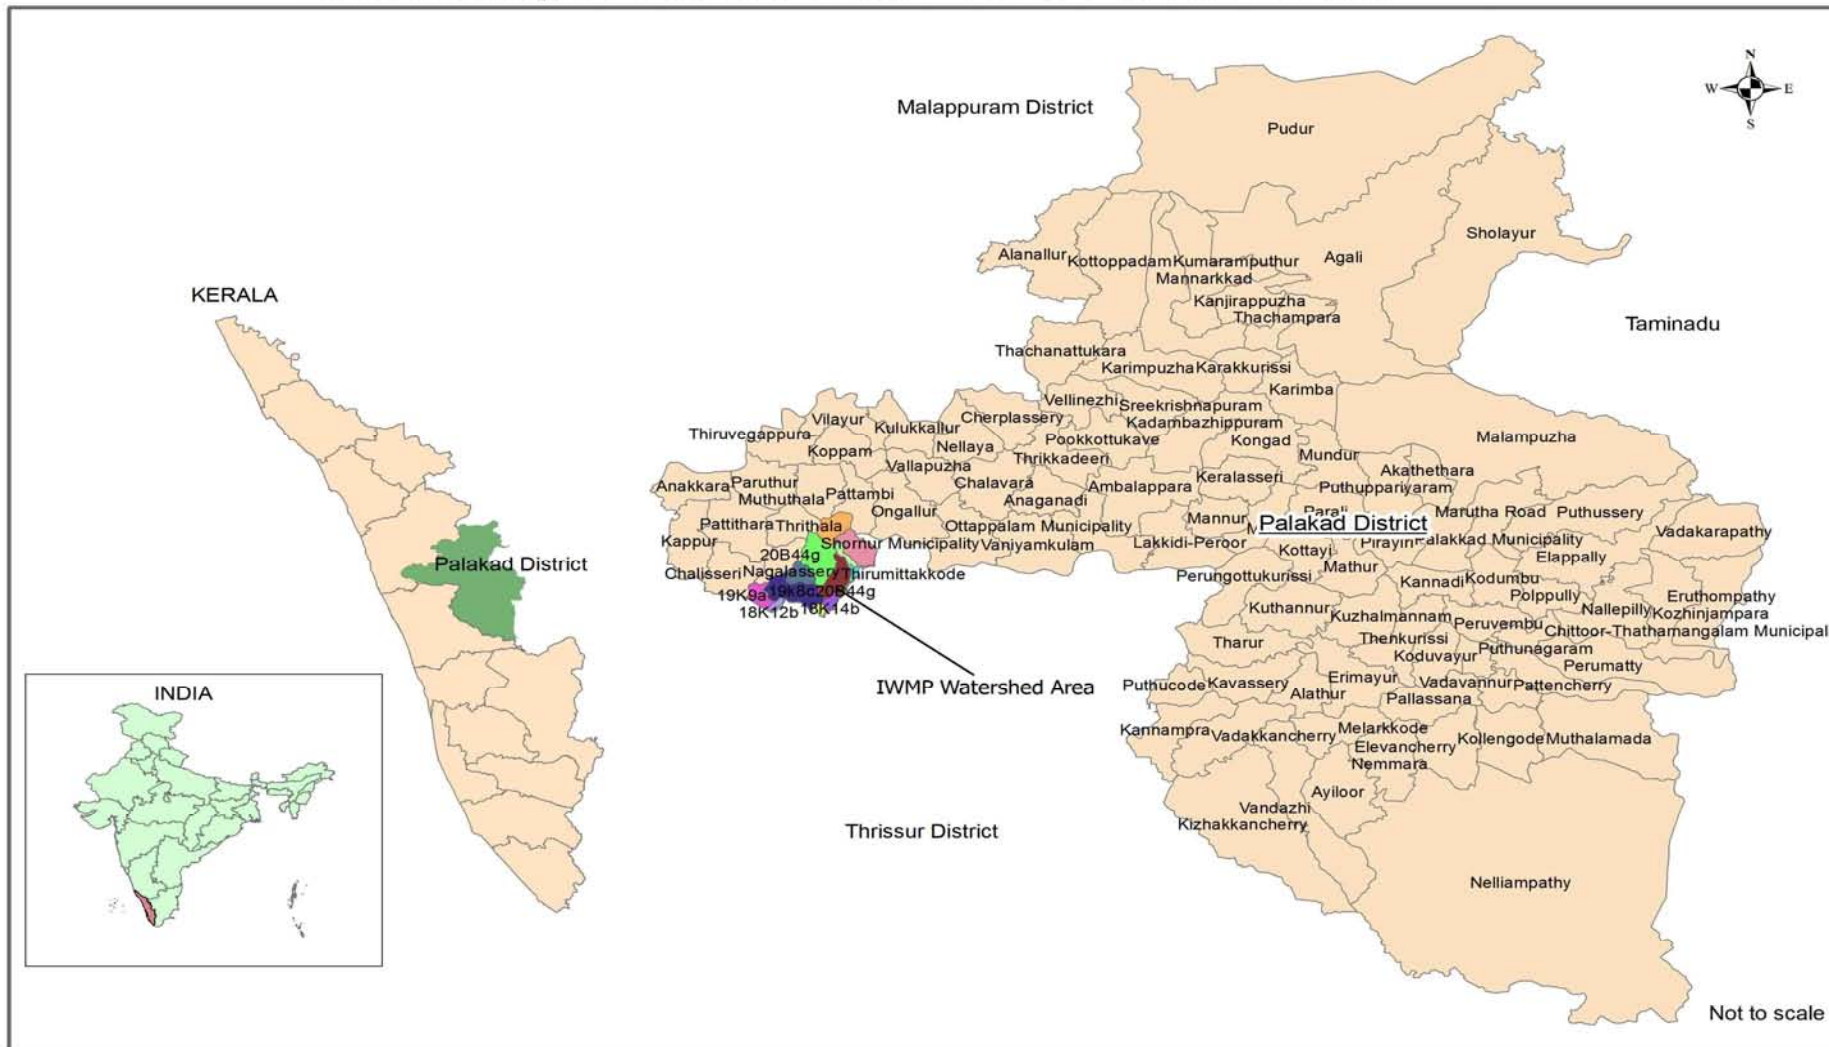

**Table 3 Profile of the area**

## II.2 PHYSIOGRAPHY AND RELIEF

Physiographically the area falls under midland to midup land region. Lowest elevation is 20 m MSL and is at Njangattiri and the highest elevation is 140m at Malayakam Kunnu. The relief is subnormal to excessive.

## II.3 DRAINAGE

Bharatha Puzha River is associated with this area. Watershed is drained by 12 perennial streams. The details of main drainages in each micro watershed are given below:

**Table 4 Drainages in watershed**

| Sr No | Watershed       | Main Drainage              | Perennial/Seasonal | Total Length (m) |
|-------|-----------------|----------------------------|--------------------|------------------|
| 1     | Muthalangathode | Kadachira thode            | Perennial          | 1365m            |
| 2     | Akilanam        | Manjapatta thode           | Perennial          | 2354m            |

## II.4 CRITERIA FOR SELECTION

In the selection of watersheds in IWMP certain criteria are adopted. The indicators and scores achieved are given below:

**Table 5 Criteria for Selection as per SPSP**

| No | CRITERIA  | SCORE | RANGES & SCORES   |   |   |                       |
|----|---|-------|---|---|---|-----------------------|
| 1  | Poverty Index( % of poor population)                                      | 10    | Above 80%(10)   | 80 to 50% (7.5)   | 50 to 20%(5)  | Below20 % (2.5)       |
| 2  | % of SC/ST population   | 10    | More than 40%(10)   | 20 to 40%( 5)   | Less than 20% (3)   |                       |
| 3  | Actual wages  | 5     | Actual wages are significantly lower than minimum wages (5)   | Actual wages are equal to or higher than minimum wages (0)  |   |                       |
| 4  | % of small and marginal farmers.  | 10    | More than 80%(10)   | 50 to 80%(5)  | Less than 50% (3)   |                       |
| 5  | Ground water status   | 5     | Over exploited (5)  | Critical (3)  | Sub Critical (2)  | Safe (0)              |
| 6  | Moisture index  | 15    | -66.7 & below(15)   | -33.3 to-66.6(10)   | 0 to -33.2(0)   |                       |
|    | DPAP/DDP Block  |       | DDP Block   | DPAP Block  | Non DPAP /DDP Block   | Above &70 % ( Reject) |
| 7  | Area under rain-fed agriculture   | 15    | More than 90%(15)   | 80 to 90%(10)   | 70 to 80%(5)  | Fully covered (0)     |
| 8  | Drinking Water  | 10    | No source (10)  | Problematic village(7.5)  | Partially covered(5)  |                       |
| 9  | Degraded land   | 15    | High- above 20%(15)   | Medium- 10 to 20% (10)  | Low less than 10% of TGA(5)   |                       |
| 10 | Productivity potential of the land  | 15    | Lands with low production & where productivity can be significantly enhanced with reasonable efforts (15) | Lands with moderate production & where productivity can be enhanced with reasonable efforts.(10)            | Lands with high production& where productivity can be marginally enhanced with reasonable efforts(5)            |                       |
| 11 | Contiguity to another watershed that has already been developed/treated   | 10    | Contiguous to previously treated watershed & contiguity within the micro watersheds in the project(10)    | Contiguity within the micro watersheds in the project but non contiguous to previously treated watershed(5) | Neither contiguous to previously treated watershed nor contiguity within the micro watersheds in the project(0) |                       |
| 12 | Cluster approach in the plains (more than one contiguous micro watersheds | 15    | Above 6 micro-watersheds in cluster(15)   | 4 to 6 micro watersheds in cluster(10)  | 2 to 4 micro watersheds in cluster (5)  |                       |

|   |  |  |   |  |  |
|---|--|--|---|--|--|
| in the project)   |  | Above 5 micro- watersheds in cluster(15) | 3 to 5 micro watersheds in cluster( 10) | 2 to 3 micro watersheds in cluster (5) |  |
| Cluster approach in the hills(more than one contiguous micro watersheds in the project) |  |  |   |  |  |

**Weightage criteria**

| No | District | Name of Project | No of micro watershed to be covered | Proosed project area (Ha) | Type of Project<br>(Hilly/Desert/<br>Others) | Proposed cost<br>(Rs.<br>in lakh) | Weightage under the criteria# |   |   |    |   |   |    |     |    |    |    |    |    |       |

## II.5 CLIMATE

The district experiences humid type of climate. The district receives maximum rainfall during the south west monsoon followed by the north east monsoon. The other months considerably receives less rainfall. Major rainfall is received during June to September in the southwest monsoon.

**Table 6 Average Rainfall**

| Rainfall data for the last 10 years (in mm) |         |          |       |       |       |       |        |        |           |         |          |          |                 |         |

### Temperature

The maximum temperature ranges from 34.1 to 35.8 C where as the minimum temperature ranges from 20.6 to 25.7C. The average annual maximum temperature is 32.40 C and the average annual minimum temperature is 23.4 C. Generally March and April months are the hottest and November, December, January and February months are the coldest.

## Geology

The area comprises massive charnockite/gneissic, charnockite, pyroxene granulite, pyroxenite, norite, and magnetite quartzite amongst which massive charnockite/gneissic charnockite is the most widely distributed. Pyroxene granulite and magnetite quartzite occur as narrow bands.

## Geomorphology

The geomorphology of the area can be divided into three parts viz, the low land, mid land and mid upland. Lowland is the area with an elevation of less than 20 m amsl, midland area having an elevation of 20m to 100 m amsl, mid upland having an elevation of 100m-300m amsl. The watershed elevation range is 20m MSL to 120m MSL which means it lies in between midland and mid upland.

## II.6 GROUND WATER

|                      |                               |
|----------------------|-------------------------------|
| Depth to water table | Pre monsoon – 1 to 6 mbgl     |
|                      | Post monsoon - 2 to 12.0 mbgl |

## II.7 WATER SUPPLY AND IRRIGATION

Most of the houses in watershed area have wells. So majority are using their own well for drinking water. But in the very starting of summer season most of the wells get dried up. Public taps and water connections are also rarely seen. Natural Springs are other sources to meet the water needs of people. There are 6544 wells in the watershed area.

**Table 12 Existing water Supply Schemes**

| Sr No | Name of Water Supply Scheme | Watershed       | Grama Panchayath |

## II.9 AGRICULTURE AND PRESENT LAND USE

**Table 166 Agriculture and Present Land use**

| SI No        | Crop        | Area (Ha)   | Percentage |
|--------------|-------------|-------------|------------|
| 1            | Paddy       | 2021.4      | 39.5       |
| 2            | Coconut     | 1025.7      | 20.18      |
| 3            | Mixed Trees | 802.69      | 15.79      |
| 4            | Mixed crops | 620.61      | 12.26      |
| 5            | Banana      | 471.05      | 9.27       |
| 6            | Rubber      | 142.47      | 2.8        |
| <b>Total</b> |             | <b>5084</b> | <b>100</b> |

## II.10 ANIMAL HUSBANDRY AND DAIRYING

Animal husbandry and dairy development play a significant role in rural development. The details of livestock in the watershed areas are shown in the table below. Livestock acquire special importance in watershed management from both socio-economic and ecological considerations. They are an integral part of the farming system. Adoption of suitable technical innovations for improving the livestock productivity is needed in the watershed areas. Proper recycling of organic manure in the area is of utmost importance for maintenance of soil fertility.

**Table 177 Livestock Status**

| Waterhsed       | Cow         | Goat        | Buffalo    | Hen          | Duck       |
|-----------------|-------------|-------------|------------|--------------|------------|
| Muthalangathode | 224         | 54          | 4          | 991          | 84         |
| Akilanam        | 194         | 120         | 14         | 744          | 38         |
| Cheenikazhaya   | 182         | 154         | 7          | 814          | 72         |

Relief Map

## II.12 METHODOLOGY

The following methodology was adopted as part of preparation of Detailed Project Report of IWMP in Thrithala Block Panchayat. Transect walks, Participatory Resource Mapping, Focusgroup discussion, Base line survey, drainage line survey, GIS mapping, Institutional and capacity building etc were the major events in the process.

### **Transect Walk**

Transect walks were conducted to identify the ridge lines to demarcate the watershed boundary. After delineation, the farmers and other stake holders of watershed walked along the streams. It helped the team members to understand the basic characteristics of watershed area, and to ascertain the mode of treatment according to the geographical specialties in each area.

### **Participatory Resource Mapping**

After conducting the transect walk, the groups made resource maps of the entire watershed showing boundaries of private lands and common lands, details of ownership, land use and other details like location of major gullies, location of water bodies and common lands, types of vegetation and soil types in different parts of the watershed etc.

### **Focused Group Discussion**

Focus Group Discussions were conducted in order to gather specific opinions and suggestions with regard to the activities to be included in the DPR.

### **Base Line survey**

A detailed household level socio-economic survey was conducted in the project area to gather relevant information to develop the baseline data for the formulation of DPR.

### **Drainage line Survey**

A team of members and the representatives of the TSO and of other stakeholders visited all prominent drains in the project area as part of surveying the status of the drains. The survey was useful in assessing the state of the drains and to ascertain the need and suitability of various interventions to protect and develop them. People's experience and knowledge attributed much to the process.

### **Remote Sensing Data and GIS**

A remote sensing technique provides easy access to data, on vegetation and topographical features of any geographical area. This data has been used for assessment of crop coverage, wasteland and hazard prone areas in watershed area. GIS has been widely used in characterization and assessment in this particular watershed area. Basic physical characteristics of a watershed such as the drainage network and flow paths could be derived from readily available Digital Elevation Models (DEM). This has been used for the interpretation of land use and hydro geo morphology of the watershed also.

## **Preparation of Action Plan and Approval from Gram Sabha**

Data gathered through the above process have been compiled, consolidated and analysed to develop a data base to evolve a realistic plan of actions to be implemented in the project area. The draft action plan thus prepared was placed before the concerned gram sabha for approval. After detailed discussions, the action plan was modified by incorporating valid and feasible suggestions from the gram sabha into it and the same was approved by the Gram Sabha.

## **II.13 INSTITUTION BUILDING AND PROJECT MANAGEMENT**

The stipulations with regard to the mobilization and organization of the watershed community as laid down in the Common Guidelines have been followed in the case of this project. The institutions at various higher levels have also been constituted. The details are given below:

### **State Level Nodal Agency-SLNA**

Chairman of SLNA is Agricultural Production Commissioner. SLNA has a fulltime Chief Executive Officer (CEO). SLNA consist representatives of NRAA, Central Nodal Ministries, NABARD, Rural Development, Agriculture, Animal Husbandry, Forest, Ground Water, NGOs, Professional from Research Institutes, Representatives of MGNREGS, BRGF. SLNA sanctions the IWMP Projects for the State and looks after the overall address performance of the programme in the state. It is supported by a Technical Unit consisted of Experts from related fields. SLNA maintains A State Data Cell too.

### **District Level Coordination Committee-DLCC**

A DLCC, as envisaged in the Guidelines, has been constitutes in the District. The DLCC, Palakkad consists of all district level officers of the line departments. The District Panchayat President is the chairman and the District Collector is the Member Secretary of the DLCC. The DLCC takes up overall responsibility for getting the Project Reports and Action Plans under IWMP properly formulated and presenting the same before the District Planning Committee for approval. A Watershed Cum Data Cell-WCDC- has been constituted under the leadership of the Project Director, PAUs, designated as District Project Manager.

### **Programme Implementing Agency-PIA**

The Project Implementing Agency of this Project is the Block Panchayath, Thrithala.

### **Watershed Committee (WC)**

The Gram Sabha will constitute the Watershed Committee (WC) to implement the Watershed project with the technical support of the WDT. The Gramapanchayat President is chairman of each watershed committee and Convenor is Village Extention Officer of the concerened Gramapanchayat. The Watershed Committee will open a separate bank account to receive funds for watershed projects and will utilise the same for undertaking its activities.

## Self Help Groups

SHG's are being formed in project villages. SHG's would constitute members mostly from SC's, ST's, women, landless and members belonging to very poor families. These groups would be homogeneous in nature and will have common goal. They would save money monthly as decided by them and will hold meetings regularly at least once in every month. Basic orientation and skill training will be provided to them under IWMP. They will also be given Revolving fund assistance to enable them to meet their urgent needs for starting micro enterprises.

**Table 19 Self Help Groups**

| Watershed | Muthalangathode | Akilanam | Cheenikazhaya | Ittonam | Njangattiri | Pathiyanthode | Verumpilavu | Pottikathode | Pallipadam | Peringannur | Mooliparambu | Malayakam |
|-----------|-----------------|----------|---------------|---------|-------------|---------------|-------------|--------------|------------|-------------|--------------|-----------|
| Nos       | 26              | 38       | 28            | 23      | 21          | 16            | 18          | 19           | 6          | 9           | 7            | 0         |

## User Groups

User groups are formed in project area. The members of these will be those persons who are directly benefited by activities under watershed. Members of User Groups would take responsibility to manage the assets created under the project. They will further undertake responsibility for fixing user charges from their members. User Groups would be trained under IWMP so as to enable them to manage their assets created.

## II.14 PROJECT MANAGEMENT

Phase I – Preparatory phase - duration is 1 year

Phase II – Watershed Work Phase –duration is 2 to 3 years

Phase III – Consolidation and Withdrawal phase-1 to 2 years is the duration of this phase.

Various activities envisaged under these Phases are the following:

### PREPARATORY PHASE

The preparatory phase of the project will be the first year of the project. The major objective of this phase is to build appropriate mechanisms for adoption of participatory approach and empowerment of local institutions (W.C, S.H.G and U.G). WDT will assume facilitating role during this phase. Major activities during this phase are inauguration, Entry Point Activities (EPA), Capacity Building to stake holders of watershed area, preparation of the DPR (Detailed Project Report) through PRA (Participatory Rural Appraisal) and FGDs (Focused Group discussion).

### WATERSHED WORK PHASE

Important part of the project is this phase as all the activities envisaged in the Detailed Project Report are executed here. Activities coming under action plans like watershed development works, livelihood activities, production system and microenterprises implemented in this phase.

## **CONSOLIDATION AND WITHDRAWAL PHASE**

The objective of this phase is to create new nature-based, sustainable livelihoods and raise productivity levels of the augmented resources and economic plans developed during the Watershed Works Phase. The following activities are proposed to be carried out during this stage.

1. **Documentation:** It is proposed to document the activities carried out during the watershed implementation period. It will help to maintain the records and identify and propagate the successful activities carried out under the project.

2. **Up-scaling of Successful Experiments:** It is proposed to identify the best practices carried out during the project period and up-scaling the same as per feasibility and propagate the same among others members of the watershed area.

3. **Evaluation:** Evaluation is a very important activity to assess the success of implementation of the project. It is proposed to carry out evaluation at the following levels.

a. **Social Audit:** It is proposed to conduct the social audit of the programme at the watershed level where the Gram Sabah will evaluate the programme where the beneficiaries should explain their benefits and current status of the activity. The Watershed Committee should place the books of accounts of watershed programme for approval.

b. **Evaluation by External Agency:** An external agency with evaluation of the programme.

With these works, all of the watershed starting from ridge to valley can be covered for water conservation / harvesting. Under MNREGA, the eligibility area is individual land of SC/ ST/BPL and common land. To cover left over area, under this work i.e., individual land of other than SC / ST/ BPL can be substituted under the ongoing programme of IWMP. Repair, restoration and renovation works of water resources and better utility of these activities can be done under IWMP in convergence with MNREGS.

## II.15 CAPACITY BUILDING PLAN

Capacity building is the key mechanism to introduce participatory approach for planning, implementation and management of watershed activities. It is proposed to carry out the following institutional based training and capacity building programmes in the first two years of the project period, in order to equip various stakeholders to participate and implement the project. It is the major means by which Panchayat Raj Institutions and project staff shall be enabled to successfully undertake their work, with the communities of the project areas including women and other vulnerable sections of the society. Capacity building of all the stakeholders is essential to build their conceptual, managerial, technical and operational capabilities. The plan proposed for the entire project period is given below:-

**Table 20 Training Programme**

| Sr No                     | Title of training  | No of trainers | No of participants | Batch | Cost / person | No of Days | 1st year | 2nd year | 3rd year | 4th year | Total Cost (Rs.) |
|---------------------------|--|----------------|--------------------|-------|---------------|------------|----------|----------|----------|----------|------------------|
| 1                         | Training for Trainers  | 3              | 50                 | 4     | 200           | 1          | .        | .        | .        | .        | 40000            |

## II.16 ENTRY POINT ACTIVITIES (EPA)

Introduction of any new schemes and external interference of new groups, are not easily accepted by the community. So the EPA activities under IWMP help to build up a rapport with the village community. Construction of RWHT tanks, new pond digging, drinking water supply scheme, community water tank is the proposed works as entry point activities in watershed areas. These particular activities are selected because water scarcity is the main problem in the areas. It is for speedy community organization and trust building among beneficiaries.

The proposed EPA activities are given below:

**Table 21 Proposed Entry Point Activities**

| Sl no               | Activities   | Grama Panchayat | Watershed     | Unit     | Amount         |
|---------------------|--|-----------------|---------------|----------|----------------|
| 1                   | Construction of Rain water Harvesting Tank at Chathannur High School | Thirumittakode  | Pathiyamthode | 1        | 161601         |
| 2                   | Construction of Rain water Harvesting Tank at Ittonam L.P. School    | Thirumittakode  | Ittonam       | 1        | 94528          |
| 3                   | Enakunnu drinking water supply scheme                                | Thirumittakode  | Cheenikazhaya | 1        | 747000         |
| 4                   | Akilanam thekkekkara drinking water supply scheme                    | Thirumittakode  | Akilanam      | 1        | 602000         |
| 5                   | New pond construction – Madathil pond Aamakkavu padasekharam         | Nagalassery     | Verumpilavu   | 1        | 870000         |
| 6                   | Construction of Rain water Harvesting Tank at Njangattiri School     | Thrithala       | Njangattiri   | 1        | 110000         |
| 7                   | Ezhumangad drinking water supply scheme                              | Thirumittakode  | Cheenikazhaya | 1        | 453000         |
| <b>Total Amount</b> |  |                 |               | <b>7</b> | <b>3038129</b> |

## II.17 MAJOR PROBLEMS IN WATERSHED

### Water problems

- Unavailability of water during summer season.
- Maintenance work required for streams and ponds at different places in the watershed area.
- Bunds at different watershed area are old and destroyed as years pass by.
- Water slogging at different places makes it difficult for the people around the treatable area.
- Most of the streams and ponds are not cleaned.
- 75% of the people use own well for their day to day life but it gets dried up in extreme summer season.

### Agriculture

- Diminishing agriculture production\
- Water scarcity
- Lack of marketing facilities
- Unavailability of labour
- Crops damaged by wild animals.
- Harvested crops receive unreasonable money.
- Infertility of soil.

### Animal Husbandry

- High price for cattle feed.
- Unavailability of fodder grass for cattle.
- Cattle are affected by mouth to feet disease.
- Unavailability of proper milk societies.

### Marketing

- Lack in privilege of price fixation for their products
- Agriculture crops receives low price
- Farmers are exploited by middle men.
- No marketing facilities in the premises of watershed area.

### **Environmental problems**

- Uncontrolled waste disposal from near by shops and hotels are dumped into streams and ponds.
- Emission of plastic wastes causes serious health issues to the inhabitants in the watershed area.
- Lack of waste disposal methods in the watershed.

### **Social problems**

- Lack of marketing facilities for the products produced by SHG.
- Unawareness regarding different schemes introduced by govt. for women.
- Families in the watershed area are financially unstable.

## **II.18 MAJOR CONSERVATION INTERVENTION PROPOSED**

### **NATURAL RESOURCE MANAGEMENT**

The following are some of the major interventions proposed in this watershed area with a view to

#### **1. Tree planting**

The Agro forestry system in cultivated land has to be taken up with active involvement and participation of farmers. Tree planting is the process of planting saplings for land reclamation or landscaping purposes.

#### **2. Stream retaining walls**

The edges of the banks may be stabilized with vegetative hedges, whereas grass stabilization will be provided on the top and inner sides. Also stream bank erosion can be controlled.

#### **3. Earthen bunds**

It has some environmental benefits like noticeable technology, positive environmental impacts, leading to the rehabilitation of degraded lands and reducing soil erosion.

#### **4. Coconut trenching and mulching**

Proper Soil and moisture conservation measures are vital for better performance of coconut trees, especially in slopes and undulated terrains. Coconut trenching will contribute to good soil moisture conservation, and it is best to be done before the onset of monsoon. It is low cost process and needs reduced labour requirement. Soil porosity and aeration are vastly improved through this.

Mulching is an important technique for moisture conservation. The basins of coconut trees are mulched with coir dust, coconut husks, green leaves, dried leaves, organic wastes and dried coconut leaves. The mulching is best done before the end of the monsoon and before the topsoil dries up.

## **5. Well Renovation**

The activity of well renovation can be divided into 3 parts such as repairing, cleaning and deepening.

*Repairing:* the renewal or reconstruction of the existing well or the repairing or replacing of pumping equipment.

*Cleaning:* removingof rust, algae, sand, gravel or any other obstruction from an existing well.

*Deepening:* digging the existing well, to an increased depth to secure normal supply of water.

## **6. Well Recharging**

Open wells have a major role to play in the artificial recharge of ground water. Roof top rainwater and surface water can be filtered and allowed to recharge the open wells through pits taken near the wells.

## **7. Check Dams**

“Check-dams” are small barriers built across the direction of water flow on shallow rivers and streams, for the purpose of water harvesting. The small dams retain excess water flow during monsoon in a small catchment area behind the structure. Pressure created in the catchment area helps force the impounded water into the ground. The major environmental benefit is the replenishment of nearby groundwater reserves and wells. The water entrapped by the dam, surface and subsurface, is primarily intended for domestic needs, livestock and irrigation.

## **8. Percolation pits**

Percolation pit is also a method for harvesting rain water. The pits of appropriate size collect water, and allow the rain water to percolate into the soil. The outcome of this activity is the increased ground water table level.

# PRODUCTION SYSTEM AND MICRO ENTERPRISES

## 1. Vegetable cultivation

The State has been depending on its neighboring states to meet the increasing need for vegetable. The vegetable cultivation is a proposed activity in the project area, that will help to make the people self sufficient. The land type and climate here are also favorable for vegetable cultivation.

## 2. Arbana (Single wheel barrow)

A wheel barrow is a small hand propelled vehicle, usually with just one wheel, designed to be pushed and guided by a single person using two handles to the rear.

## 3. Cow rearing

Cattle rearing involves the breeding and general care of dairy cattle. The cow rearing is proposed in the areas as a production system, because the rural poor can raise the standard of living through the rearing of good breed of cattle. Dairy development of the area is another output of cow rearing practice in the area.

## 4. Biogas Plant

Biogas typically refers to a gas, produced by break down of organic matter in the absence of oxygen. Organic waste such as dead plant and animal material, animal feces and kitchen waste can be converted into gaseous fuel called bio gas. Biogas originates from biogenic material and is a type of bio fuel.

## 5. Electric Motor (1.5 hp)

Electric Motor is used for the purpose of supplying water to the agricultural fields. It is helpful for the farmers.

## 6. Drip Irrigation

Drip irrigation system is adopted in the watershed area where water scarcity prevails. Through this method it requires less amount of water for cultivation.

## 7. Horticulture

Horticulture plants are distributed to the farmers in the watershed area.

## 8. Dwarf coconut seedlings

A dwarf coconut seedling is a variety of coconut plants distributed to the farmers of the concerned watershed.

## LIVELIHOOD ACTIVITIES

Studies on women's contribution to household income reveal that, women tend to contribute a higher proportion of their income for family sustenance, while men spend more for their personal comforts. Several programmes have been introduced by the central and state governments by recognizing that women empowerment, is the best strategy for poverty alleviation and for ensuring gender equality. To be empowered, it is imperative that women mobilize and organize themselves. When group of women do this process together, they reinforce each other, and the strength of the collectiveness has a great role to play. Through this they are able to identify their own problems and priorities.

Integrated Watershed Management Programme (IWMP) is also focused to deal with rural poverty. Developing Community Based Organizations (CBOs) will assist the rural poor not only soil and water conservation measures, but also to improve their livelihoods. Livelihood plans under IWMP in Thrithala Block Panchayath also aims to improve peoples participation and facilitation of better livelihood opportunities for the marginalized.

### OBJECTIVES

- To improve the socio economic status of the people inhabited in the watershed areas.
- To create employment opportunities for the stakeholders, both men and women.
- To eliminate the migration of the inhabitants due to lack of employment opportunities.
- To empower women through generating income for their families and through offering a distinctive status for women either as entrepreneurs or as leaders.

Goat Rearing, BackyardPoultry Farm, Vegetable cultivation, Paddy cultivation, Food Processing Unit etc. are some of the proposed livelihood activities in the watershed areas under the IWMP project.

The proposed activities are given below:

#### 1. Goat Rearing

Goat farming is an important component in dry land farming system. It is one of the techniques to improve the economy of rural farming community. Malabari goat rearing has been found to be highly remunerative, compared to rearing other farm animals, and it is advocated as a better substitute of livelihood for the rural poor.

#### 2. Backyard Poultry Farm

Poultry farming is the raising of domesticated chickens, for the purpose of meat or eggs for food. The manure from poultry can be used to manure crops. Poultry rearing does not require much infrastructure facilities.

#### 3. Food processing unit

The popular kinds of food processing units are pickle manufacturing, pappadam manufacturing, chips making etc.

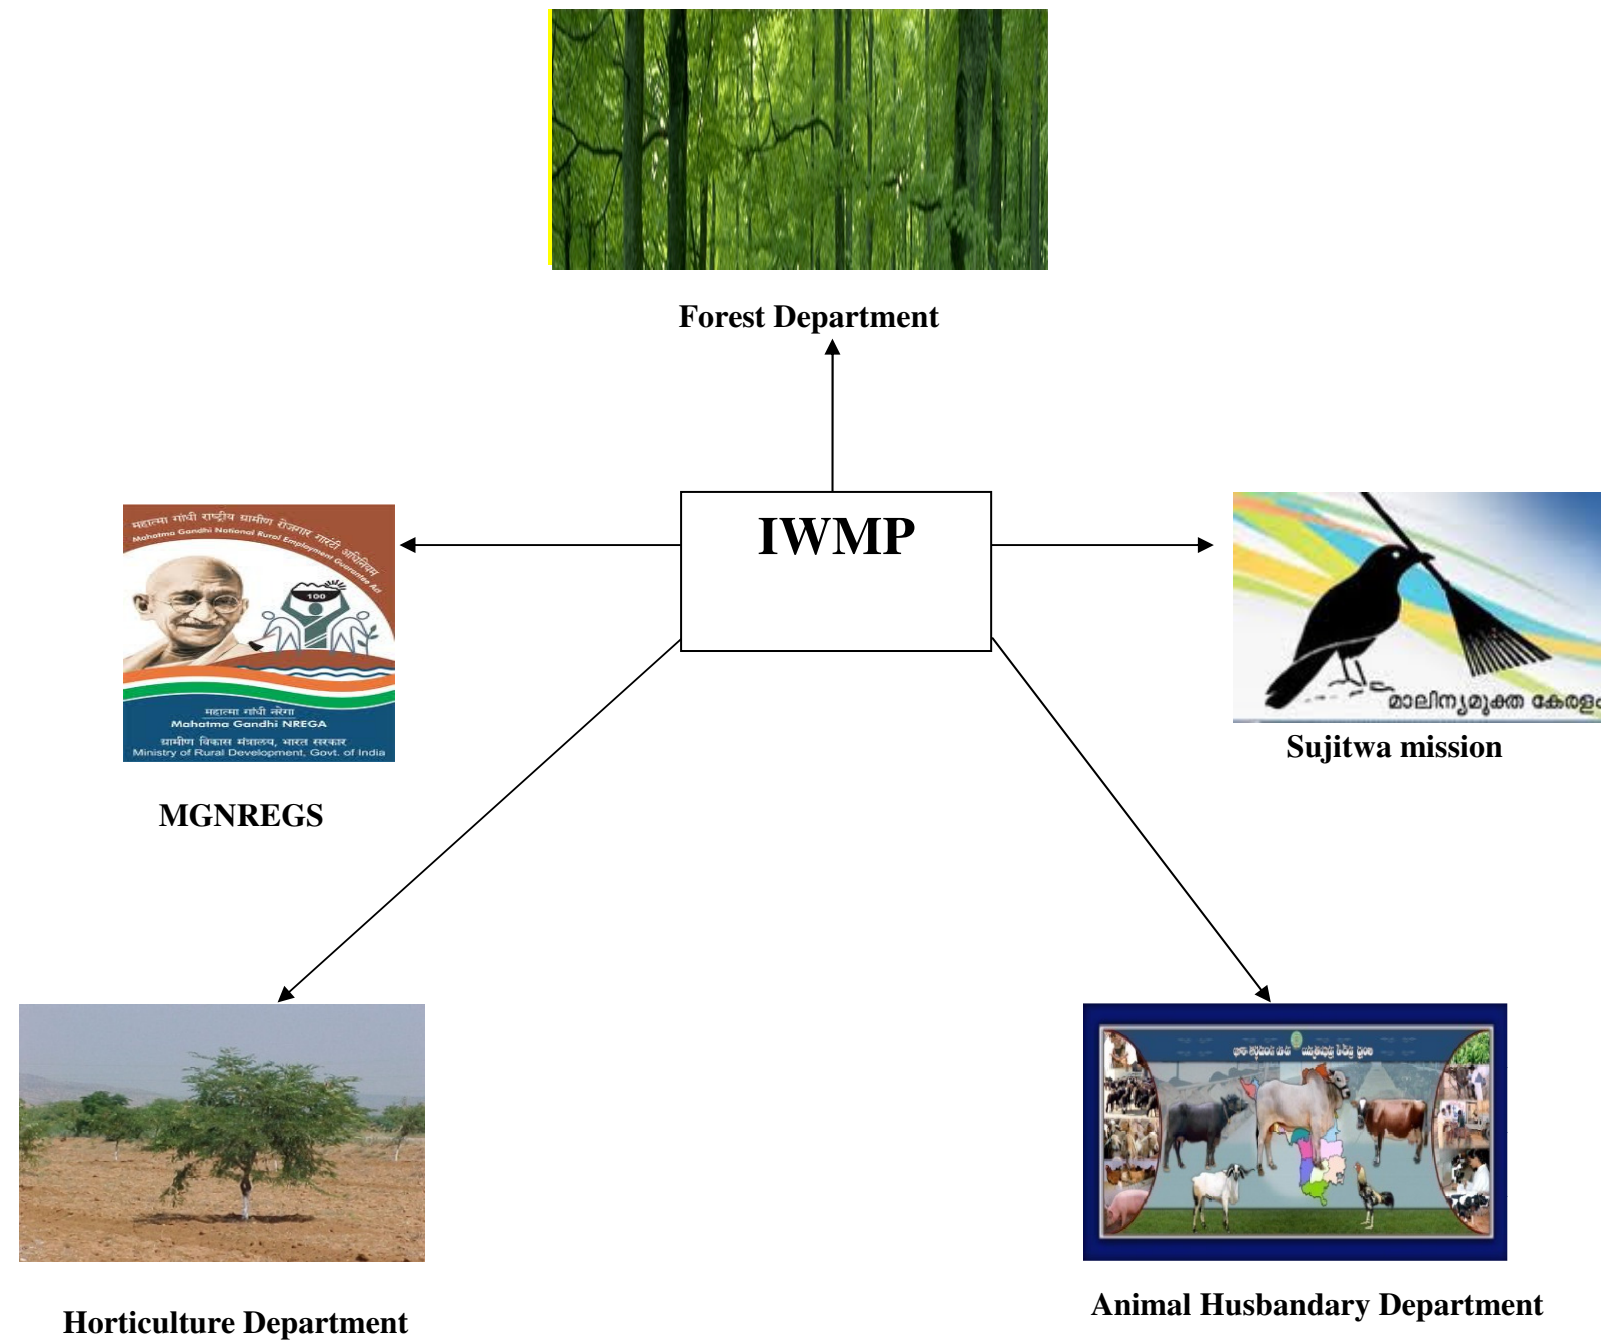

#### 4. Paddy cultivation

Paddy cultivation in an acre is proposed as a group activity recommended for the SHG/JLG in the watershed area.

#### 5. Banana cultivation

Banana cultivation is a seed money project in the watershed area included in the action plan of different watersheds. It is included in the livelihood activities as most of the individuals are farmers.

## II.19 SCOPE FOR CONVERGENCE

The project activities of Integrated Watershed Programme Management Project in Thrithala are also converged with activities of various departments and other schemes in the areas. The watershed development activities can be classified into Natural Resource Management, Livelihood enhancement activities and Production system and Microenterprises. All these activities are converged with other ongoing schemes in the Block Panchayath like MNREGA and other line departments. The convergences with other schemes will help to reach the project activities to maximum stakeholders.

The main objectives and reasons for seeking convergence are:

- Avoid duplication of efforts and redundant actions.
- Enable sharing of resources for common objectives.
- Enhance effectiveness of programme delivery.
- Improve quality of service provided.
- Develop effective linkage with various development initiatives.
- Help to identify new opportunities and options.
- Ensure transparency and accountability in governance.
- Result in the effective monitoring of outcomes

### **Merits of Convergence**

**Increase in Social Capital:** Collective planning and implementation among different stakeholders will enhance social capital. This will also improve management and work output.

**Increase in Physical Capital:** The process will aid in creating durable assets and will also improve land productivity.

**Facilitation of Ecological Synergies:** Regeneration of natural resource base through different activities such as, afforestation, drought proofing, flood proofing etc will lead to the effective use of resources.

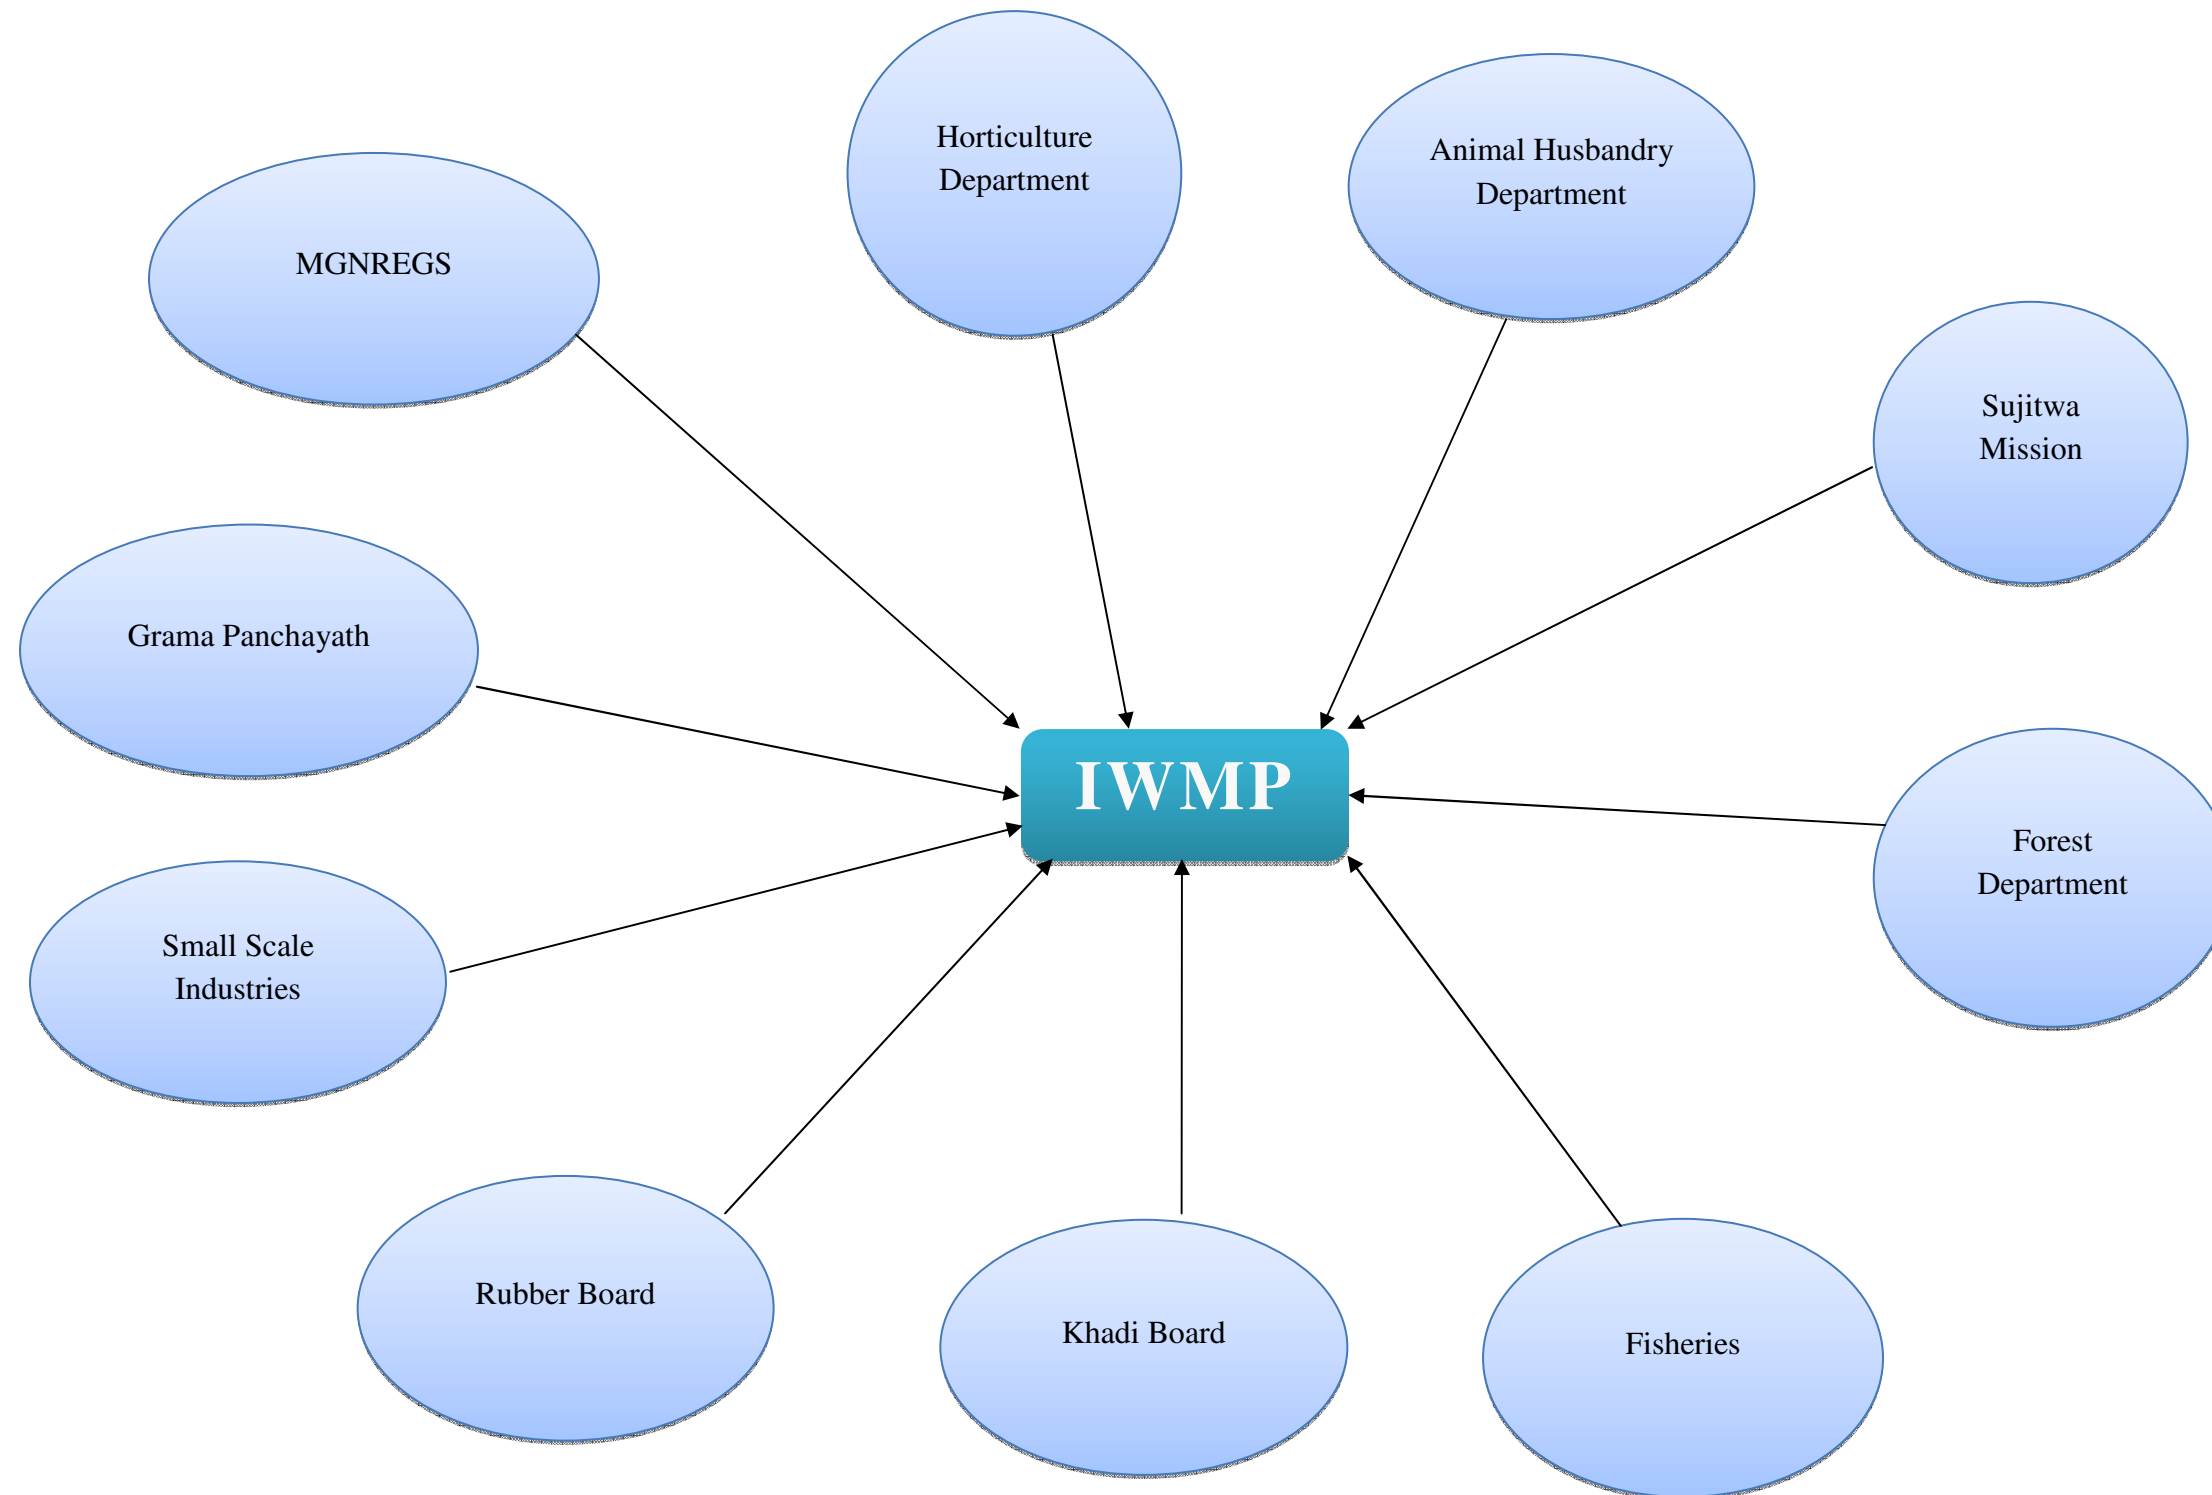

**Enhance economic opportunities:** Income opportunities, savings and investments may be generated through activities.

**Strengthen Democratic Processes:** Convergence awareness and planning at the grass root level will lead to greater ownership of projects.

**Facilitate Sustainable Development:** Convergence efforts through creation of durable assets, rural connectivity, productivity enhancement and capacity development lead to sustainable development.

## Convergence Agencies

The list of Convergence Agencies is given below:

**Table 22 Estimate of NRM Activities with Convergence**

| Integrated Watershed Management Programme                       |                                |               |      |           |                            |             |      |           |                                |                       |

## II.22 WATERSHED DEVELOPMENT FUND

One of the mandatory conditions for selection of villages in Watershed Development Programmes is people's contribution towards Watershed Development Fund (WDF). The contributions to WDF shall be a minimum 10% of the cost of works executed on individual lands. However, in case of SC/ST and persons identified below the poverty line, the minimum contribution shall be 5% of the cost of works executed on their lands. Contribution to the Fund in respect of community property may come from all the beneficiaries, which shall be a minimum of 5% of the development cost incurred.

It should be ensured that the contribution comes from the beneficiary farmers and is not deducted from the wages paid to the labourers who are engaged to treat the private lands. These contributions would be acceptable either in cash/ voluntary labour or material. A sum equivalent to the monetary value of the voluntary labour and materials would be taken from the watershed project account and deposited in this Fund. The Gram Panchayat shall maintain the Watershed Development Fund separately. The Chairman and Secretary, Grama Panchayath will operate the WDF account jointly. Individuals as well as community organizations should be encouraged to contribute generously to this Fund. The proceeds of this Fund shall be utilized in maintenance of assets created on community land or for common use after completion of project period. Works taken up for individual benefit shall not be eligible for repair/maintenance out of this Fund.

## II.23 EXPECTED OUTCOME

Table 52 Expected Outcome

| Expected outcome of activities taken under IWMP |  |                               |  |                               |
|---|--|-------------------------------|--|-------------------------------|
| Sr No   | Specific activity identified for convergence | Sector/ Schemes & Programmes  | Quantifiable estimated amount of convergence (DPR) (in lakh's) | Quantifiable Expected Outcome |
| <b>Natural Resources Management</b>             |  |                               |  |                               |
| 1   | Pond side protection                         | MGNREGS                       | 74.7   | 925 ha                        |
| 2   | Stream side protection                       | MGNREGS                       | 49.7   | 125 ha                        |
| 3   | Pond desilting                               | MGNREGS                       | 7.9  | 100 ha                        |

## II.24 EXIT PROTOCOL

While preparing the detailed Action Plan/Treatment Plan, the Gram Sabha/Gram Panchayat, under the technical guidance of WDT, shall evolve proper Exit Protocol for the watershed development project. The Exit Protocol shall specify a mechanism for maintenance of assets created, augmentation including levy and collection of user charges, utilization of the Watershed Development Fund etc. Mechanism for equitable distribution and sustainability of benefits accrue under the watershed development project should also be clearly spelt out in the Exit Protocol. While approving the Action Plan for the watershed, the ZP/DRDA shall ensure that the detailed mechanism for such Exit Protocol forms part of the Action Plan/Treatment Plan.

The active intervention period of most of the projects is about five years after which the PIA is expected to withdraw and move to other watersheds/areas. Maintenance of the infrastructure was a serious handicap prior to the concept of people's participation. All contributions mentioned previously were kept in a separate account called the Watershed Development Fund (WDF) in the name of the watershed associations to be operated after the exit of the PIA. Wherever participants could be convinced about the philosophy of cost-sharing, overall contribution per watershed went beyond 5-10 per cent of the stipulation since it was meant for the welfare of the community and the maintenance of the infrastructure created under the watershed programme. Despite several guidelines, this aspect is not dealt with adequately till date. Hence, in most of our sample watersheds the WDF has not been utilized fully. Due to changes/replacement of political/elected representatives in the local bodies and lack of proper guidance to Watershed Committees this account remains unutilized with the PIA. So the following must be kept after withdrawal – 1. Must have an office in each watershed to continue the process. 2 All NRM activities in the concerned area to be followed on accord of WC. 3 A paid secretary to be maintained in each watershed.
